Breeding Technology Centre

Bringing ornamentals into the era of predictive breeding

Horticultural breeding is transitioning from conventional to predictive breeding and Dümme Orange® is the driving force behind this. Our Breeding Technology Centre in the Netherlands is the largest horticultural breeding laboratory in the world. A high-tech home for international pioneering scientists, breeders and specialists to set new standards in flower and plant genetics and breeding excellence.

Moving away from relying on conventional processes to develop flower and plant varieties, predictive breeding is using large data-sets on plant

performance and a high-end IT infrastructure to achieve breeding goals faster and more reliably. Technology-driven breeding will allow the ornamental industry to become more sustainable, by using state-of-the-art breeding tools to develop novel resistance traits.

We believe in the power of innovation and lead the way in the use of modern breeding tools and prediction software for faster creation of high-impact varieties. We assure you get the best, and better every time.
